Priority

Acknowledgment is made of applicant's claim for foreign priority based on an application filed in Japan on 27 December 2000. It is noted, however, that applicant has not filed a certified copy of the 2000-398964 application as required by 35 U.S.C. 119(b). However, copy of the priority document is not present in the application file. A copy of the priority document is respectfully requested.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 14 and 15 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-3 of U.S. Patent No. 6,605,387 B1. Although the conflicting claims are not identical, they are not patentably distinct from each other because instant claims 14 and 15 are directed to an electrode powder and battery *per se*. The instantly claimed products are encompassed by the hydrogen storage alloy containing 1.5 to 5.0% by weight of a magnetic substance

Art Unit: 1745

comprising metallic nickel deposited on a surface of the hydrogen storage alloy, as claimed by U.S. Patent No. 6,605,387 B1.

Allowable Subject Matter

Claims 1-13 are allowed.

The following is a statement of reasons for the indication of allowable subject matter: A method of preparing hydrogen storage alloys claimed, which includes as a first step the process of "moistening the alloy powder prior to an alkali treatment with an aqueous solution." Treating hydrogen storage alloy powders with alkaline and/or acid solutions to control oxide coating or passivation layers on the alloy particles is well-known, as shown by the nearest prior art of Yamamoto et al. and Ishii et al. However, a step of moistening the alloy powder prior to an alkali treatment with an aqueous solution is not suggested by the prior art. The addition of an additional processing step would not be obvious to one of ordinary skill in the art.
